Experience

Front-end developer 2023
1 Ecuador

- Developed several personal web projects using technologies such as HTML5, CSS3, JavaScript, and frameworks like React.js.
- Focused on creating responsive designs and improving accessibility to ensure optimal user experiences on both mobile and desktop devices.
- Used version control systems like Git to maintain a clean project history and collaborate effectively on coding tasks.
- Integrated third-party APIs to enhance website features and functionality.
- Applied best development practices, including modularity, code reusability, and efficient state management in React.
- Completed a personal project focused on creating a photography portfolio website, showcasing my photography work with a visually appealing and user-friendly design.

Pixelap – Photo Editing Showcase 2024
1 Ecuador

- Pixelap
- I developed Pixelap, a personal project created to showcase my photo editing work. The website features a dynamic gallery where I display various edited photos, highlighting my skills in retouching, color correction, and creative enhancements. I used HTML, CSS, and JavaScript to create an interactive and engaging experience that allows users to explore and appreciate the edits made. This project reflects my ability to combine web development with photo editing, offering an accessible platform to present my work and creativity.

Projects

PixeLap 2024
My photography projects

- Pixelap
- Pixelap is a personal platform where I showcase my photography projects, highlighting my technical and creative skills in this field. Through this page, I aim to share my visual experiences and connect with like-minded individuals who share my passions.
